The screenshot shows a browser developer tools debugger interface. On the left is a code editor with a snippet titled 'ShowRecordLinea...Y6nyMZ4g%3d%3d'. The code is a mix of standard JavaScript and some specific annotations from a library like APrise.js. On the right is a sidebar with various breakpoints and listeners. A red arrow points from the error message in the sidebar back up to the problematic line of code in the editor. The error message itself is 'Uncaught (in promise) TypeError: Cannot read properties of undefined (reading 'document')'. This indicates that at line 158, the variable 'elem' is undefined when it tries to call 'querySelector' on it.
